DETAILED ACTION***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 12, 2004 has been entered.

Response to Arguments

Applicant's arguments, see pages 8 – 9, filed April 12, 2004, with respect to claims 1 – 5, 7 – 9, 11 – 20, and 22 have been fully considered and are persuasive. The rejection of claims 1 – 5, 7 – 9, 11 – 20, and 22 has been withdrawn.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 1 – 5, 7 – 9, 11 – 20, and 22 are allowable over the prior art for at least the reason the prior art fails to teach and/or suggest an apparatus for directing a laser beam toward a target location on a workpiece that includes a positioner that positions the workpiece based on coordinate position command information; position sensors that produce position signals indicative of the actual coordinate position of the positioner; processing circuitry that provides error signals indicative of a difference between the coordinate position command information and the actual coordinate position; a two-axis steering mirror that deflects the laser beam in response to the error signals in a manner sufficient to compensate for the laser beam position

errors; and a focusing lens, with an entrance pupil set at the pivot point of the two-axis steering mirror, that focuses the laser beam onto the workpiece as set forth in the claimed combination.

Cutler et al (US 5,751,585) teaches an apparatus for directing a laser beam toward a target location on a workpiece that uses two one-axis steering mirrors and both the positioner and the mirrors respond to the error signals generated by the processing circuitry.

Becker et al (US 4,001,840) teaches an apparatus for directing a laser beam toward a target location on a workpiece that uses a two-axis steering mirror to deflect the laser beam, but the workpiece is stationary.

Kawasaki et al (US 5,571,430) teaches an apparatus for directing a laser beam toward a target location on a workpiece that uses a two-axis steering mirror to deflect the laser beam and generate a predetermined pattern, but not to compensate for position errors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
